Abstract

1 stats package

1.1 Distributions

1.1.1 `\N`, Normal

Generates a normal distribution with two parameters. As an example,

```
x \N{0}{\sigma^2}
```

Will generate

$$x \sim \mathcal{N}(0, \sigma^2)$$

1.1.2 `\NormalGamma`, Normal-Gamma

Generates a Normal-Gamma distribution with four parameters. As an example,

```
x \NormalGamma{\mu}{\lambda}{\alpha}{\beta}
```

Will generate

$$x \sim \mathcal{NG}(\mu, \lambda, \alpha, \beta)$$

1.1.3 `\G`, Gamma

Generates a Gamma distribution with two parameters. As an example,

```
x \G{\alpha}{\beta}
```

Will generate

$$x \sim \mathcal{G}(\alpha, \beta)$$
